**March 10, 2019**

Savvy Studio  
325 Front Street West

**To whom it may concern:**

As an ardent software engineering student, I enjoy experimenting and tinkering around with the latest and greatest frameworks/tools. I enjoy experimenting with technology such as: 3D game engines (Unity 3D) to develop an online multiplayer space shooter game, and various implementations of encryption algorithms (RSA).

I strongly believe that not only will my technical skills will be of value to your company, but as well as my passion for making a difference in the people's lives. When I was in high school, I was both the founder of the programming club and the vice president of a student-run company in hope of promoting STEM and entrepreneurship endeavors amongst high school students.

Since your company values improving customer's lives through delivering them well designed tools providing financial services, this is a great match for both my personal and professional interests. As it gives me an opportunity to work and learn about software development as well as finance. During high school, I worked as an IT support staff in a Vancouver based investment firm, and I really enjoyed connecting with people in different backgrounds especially people from the finance and actuarial field.

I greatly look forward to hearing back and showing you some of my side projects. Thank you for your time and consideration.

**Sincerely,**

**Haydn K**

P.S – I have given a brief description as well as a snapshot of some of my side projects on my portfolio at <http://haydnkeung.me>
