Triyosoft
205-1 Yonge Street

To whom it may concern:

When I was in high school, my friends and I started a plant decorations business to gain experience on entrepreneurship endeavors, promote environmentalism and raise money for a Vancouver based charity. As a co-founder, I greatly enjoyed working with tight knit groups of people to tackle complex problems from finding investors to pulling all-nighters to meet a production deadline. During that time, I learned a lot about leadership and organization from training new employees how to prototype/design products and organizing events to promote our products.

I sincerely believe that I can use the experience and soft-skills I learned from starting a company to make a meaningful contribution to your company. Because I am self-motivated and a fast learner. In addition to working at my startup, I also worked as an IT support staff at a Vancouver based investment firm while skipping a grade in high school (grade 11) and maintaining a university entrance average of 96.6%.

I am applying to working for Triyosoft because I have experience working with a lot of the technology used by the company, and I am highly self-motivated to learn new tools to solve complex problems to improve my skill set.

Sincerely,

Haydn K

P.S Thank you for your time and consideration, please consider checking out my website (haydnkeung.me) for a showcase of some projects I made using a variety of languages/tools.
